## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 12 to 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fornell et al. (WO 98/14644).

The Fornell et al reference teaches a method and apparatus for depositing SiC or Group III-nitrides, note entire reference. In a chamber, the reactant gases are heated and flowed to the substrate. The temperatures of deposition can reach 2000 c, note page 4. The gases then deposit the material to be grown on the substrate. There are outlet means so that the remaining gases in the chamber are flowed out, note figures. There is a means to flow a separate gas, which is not a deposition gas into the chamber, note figure 1. The separate gas flow enters the chambers but does not

Art Unit: 1722

interfere with the deposition, note page 3. This separate gas, which is, can be a halogen to feed so as to interact with the remaining gases. The sole difference between the instant claims and the prior art is the placement of the separate gas feed. However, in the in absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable separate gas feed placement in the Fornell et al reference in order to increase control over when the gases interact, after deposition and still control down stream deposition.

## Response to Applicants Response

Applicant's arguments filed November 30, 2006 have been fully considered but they are not persuasive.

Applicants' argument concerning the Fornell et al reference is noted. The arguments are persuasive in view of the method claims. The reference clearly does not teach using an etching gas but insert. However, the reference does teach the flow of a second gas and no difference is seen in the apparatus due to different gas types. Thus the rejection is maintained over the apparatus claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1722

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M. Kunemund whose telephone number is 571-272-1464. The examiner can normally be reached on 8 hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on 571-272-1312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
